LAKSHMI SRIRAM ADARI

Full-Stack Engineer · Node.js / TypeScript / React / React Native · AI-Native Development

(+91) 9581120433 | sriramadari.dev@gmail.com | linkedin.com/in/sriramadari | github.com/sriramadari

SUMMARY

Full-stack engineer with **2.5+ years** shipping production software to real users as the **founding engineer at an early-stage startup**. I own features end to end across **backend (Node.js/TypeScript), web (Next.js/React), mobile (React Native), and admin systems**, from design through deployment, working directly with founders with minimal oversight. **Claude Code and Cursor are part of my daily workflow**, and I build developer tooling for MCP and LLM applications on the side.

SKILLS

- **Frontend:** React, Next.js, React Native, TypeScript, Tailwind CSS, Redux, real-time UIs (Socket.io, WebRTC)
- **Backend:** Node.js, Express.js, Python (Flask), REST APIs, BullMQ job queues, WebSockets, auth (OAuth/Passport.js)
- **Data & Infra:** MongoDB, PostgreSQL, MySQL, Redis, Firebase, AWS (SES, S3), Azure, Docker, Vercel, Git
- **AI Development:** Claude Code and Cursor in daily workflow; LLM integrations (OpenAI, Gemini), RAG pipelines, embeddings, MCP servers, Vercel AI SDK

EXPERIENCE

ProPeers | Founding Software Engineer (first engineering hire) **Remote · Mar 2024 – Present**

- Ship features **end-to-end across backend, web, mobile, and admin dashboard** for a live ed-tech product used by **500k+ users**, from problem definition and technical design to production release, reporting directly to founders.
- Optimized the user-facing Next.js app, improving **LCP/FCP from 4.4s to ~990ms**; built product UI including carousels, real-time status indicators, and mentor/bootcamp landing surfaces from Figma designs.
- Cut API response times **~70%** with Redis caching; architected an **asynchronous email processing service** using Node.js, BullMQ, Redis, and AWS SES that handles transactional email at scale.
- Migrated MongoDB from Atlas to **self-hosted Azure VMs** with replica sets and automated backups to Blob Storage, owning reliability and cost decisions.
- Built **AI product features** including a personalized learning assistant using **RAG, OpenAI embeddings, and ChromaDB**, shipped across web and mobile.
- Handle **high-severity production incidents** and revenue-critical payment flows (Razorpay) independently; guide teammates on system design and unblock releases.

Evaluate Health | Software Engineer Intern **Remote · Sep 2023 – Feb 2024**

- Built **Flask (Python) APIs** and third-party integrations; designed MySQL schemas and optimized queries.
- Built reusable **React Native** components and production mobile screens, including AWS S3 upload workflows.

PROJECTS

Support Chat | AI-powered customer-support platform GitHub | Live Demo

- Built a **full-stack customer-support platform** that lets businesses create AI support agents and embed a **customizable chat widget** on any website via a single script tag, with a Next.js dashboard for agents, tickets, and real-time analytics. Node.js/Express and MongoDB backend, AI responses powered by Lyzr agents, secured with JWT auth, bcrypt, and Zod validation; deployed on Vercel and Render.

mcp-devkit | Open-source developer tooling for MCP servers GitHub

- Published TypeScript tooling for building and testing **Model Context Protocol servers**, part of a set of dev tools I maintain for MCP, LLM apps, and Node.js observability.

SocialSync | Real-time multi-user collaboration tool GitHub | Live Demo

- Low-latency messaging, synchronized state, and peer-to-peer video using **Socket.io and WebRTC**, with Firebase Auth and MongoDB. Deployed and live.

EDUCATION

Vignan's Institute of Information Technology, Visakhapatnam | B.Tech, Computer Science (CGPA 8.7/10) **2021 – 2025**

ACHIEVEMENTS

- **Web Development Lead**, Google Developer Student Club (GDSC), VIIT. Led and shipped student-facing projects.
- Winner, **Best Innovative Track** at GDSC WOW 48-hr Hackathon (PoolPay); **3rd of 75+ teams** at SuShacks 36-hr Hackathon (MenuMate).
